

## RQ-097 – Riser Cleaning Clamp

### Key Features:

- Uses multiple nozzles and more can be added.
- Does not damage the product.
- Flexible design which can be scaled.
- Failsafe mechanism built in for self-release.

### WHATS INCLUDED

Riser Cleaning Clamp.  
High Flow Cavitation Pump.  
Cavitation Nozzles.  
ROV handle.  
Operational hoses.  
Operations Manual.  
Certificate Pack.

### OPTIONS

Spares Kit.  
Spare Brushes.  
Additional Nozzles.

### Description

The Flexible Riser Cleaning Clamp has been designed to clean flexible risers coated with Rilsan sheathing or similar soft plastic coverings.

These coatings prevent salt water penetrating down to the armoured wire and metal parts of the riser which would result in damage to the riser and loss of integrity. Rilsan and similar coatings are very susceptible to damage from sharp objects or from abrasion from close contact with steel wires etc.

Many other cleaning methods therefore put the product at risk. Our riser cleaning system uses multiple angled cavitation jetting nozzles to remove marine growth without damaging the product and is field proven.

We can design clamps from 6" up to 14" and make adaptable clamps covering variable riser diameters.
