RQ-135

Key Features

- Tough, but flexible bristles.
- Can reach speeds of 400 RPM.
- Long-Life heads

Description

The subsea cleaning brush is a ROV operated motorized rotary brush. The cleaning brush has been designed to accept an assortment of brush heads suited for various cleaning operations.

The rotary brush is driven by a hydraulic motor capable of reaching speeds of 400 RPM. The motor is also bi-directional.

The rotary brush head has tough, but flexible bristles positioned to provide maximum cleaning.

The D-handle attached also allows the ROV to handle and maneuver it easily onto the cleaning site.

Hydraulic Motor Input

Pressure	140bar (2,000 PSI)
Flow	Up to 20 LPM
Weight in Air/Water	11.3kg / 7.9kg
